

Sunset to Sunrise –

MIGRATION MANAGEMENT

**THIRDWARE
SOLUTION INC.**

Are you struggling to support both your legacy system as well as your Oracle Implementation?

Is your Oracle Implementation delayed due to demands on legacy application?

Are you looking to free up your key resources for your Oracle Implementation?

In an implementation life cycle, there are three key phases.

- Managing the legacy application
- Implementing the new application
- Sun setting the legacy application and supporting the steady state of new application.

These three phases overlap each other considerably causing the IT Management to stretch itself. Imagine a scenario where the legacy application is completely managed, leaving the key resources to concentrate on the most important Oracle Implementation.

With key resources available for the task, the implementation schedule and the business requirements are covered substantially. This effectively de-risks the project from many of the obstacles.

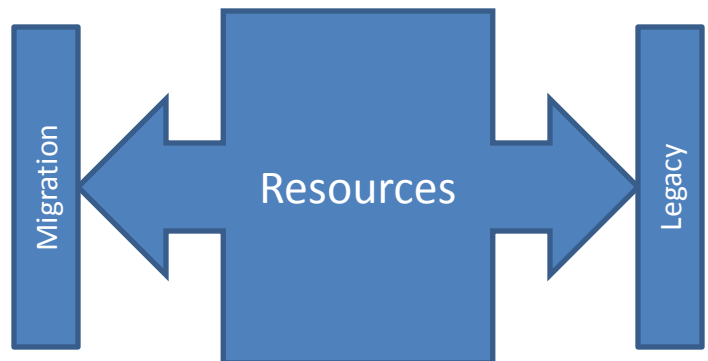

When these three phases are linked together, considerable advantages can be derived.

Sunset - Managing the legacy application:

In each company, the people who manage the legacy application are the ones who have considerable knowledge of the business processes and user requirements. It is the active participation of these resources that ensures successful implementation of the new ERP.

Companies face challenge in effectively dividing their time between managing the legacy application and managing the new implementation.

Thirdware help in taking over and managing the legacy application with minimal and required supervision. In the process, releasing these key resources to concentrate on the new implementation. Thirdware provides SLA based management services which ranges from technical support to complete support desk operation.

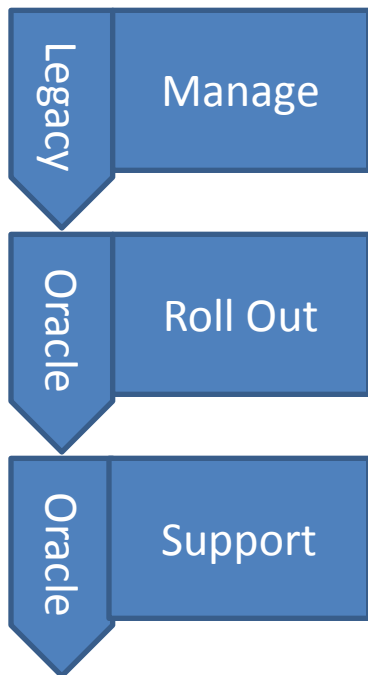

THIRDWARE SOLUTION INC.

Implementing the new application:

Implementing the new application is intrinsically linked to the legacy application. The link comes in the form of migration of data. In the case of roll out, with regional legacy models, the problem is even more acute. And Implementation team is stretched between migration tasks like configuration, migration etc and core tasks like gap analysis, customization and go live.

Thirdware seamlessly integrates legacy management with the implementation and roll out. With Thirdware's management of legacy application, advance head up can be provided for gaps ahead of a roll out.

This helps the core implementation team to focus on site preparation and migration. With its factories on Migration, Configuration and User Care, much of the repeatable tasks are handled offsite, leaving the core implementation team to focus on meeting the implementation tasks.

Support Steady State of Oracle:

With large roll outs, there is a need for continuous take over of new sites, integrating them to the support desk and managing the steady state.

Thirdware Oracle Support Services works in conjunction with the legacy application management team and Repeatable factories team to ensure continuity and seamless management of the transition. Thirdware provides SLA based services on all areas of Oracle Apps management.

Thirdware Advantage

Thirdware's has been helping companies like Pfizer, Ford Motor Co help roll out their solution across the world. Thirdware with its unique right-shore based Oracle roll-out methodology has been helping to reduce the Onsite project time significantly leading to savings in overall launch time and cost. More importantly accelerate the roll-outs enabling multi-site parallel launches with certainty.

ON TIME. WITHIN BUDGET.

Thirdware Oracle Practice *Fast Facts*

- » An experienced team of Technical & Functional Consultants
- » Strong Industry Exposure
- » Ready Fit Factories for Roll Outs
